Operations researchers have come to realize that most problems do not arise in isolation but are part of an interacting system. The process of seeking simultaneous interrelated solutions to a set of interdependent problems is planning.

Operations research - The system design problem | Britannica

The solutions of these

problems are provided in a concise way although all topics start with a more developed resolution. The proposed problems are based on the research experience of the authors in real-world companies so much as on the teaching experience of the authors in order to develop exam problems for industrial engineering and business

Principles and Solutions

In operations research, a team of experts from the different fields first define the problem then represent that problem in the form of a set of mathematical equations. After that, the computer analysis of these mathematical equations is done to find a solution for the problems, and then these solutions are applied to solve

The British/Europeans refer to "operational research", the Americans to "operations research" - but both are often shortened to just "OR" (which is the term we will use). Another term which is used for this field is "management science" ("MS"). The Americans sometimes combine the terms OR and MS together and say "OR/MS" or

Simplex Method:

Example 1. Maximize $z = 3x_1 + 2x_2$. subject to $-x_1 + 2x_2 \leq 4$
 $3x_1 + 2x_2 \leq 14$
 $x_1 - x_2 \leq 3$. $x_1, x_2 \geq 0$.

Solution. First, convert every inequality constraints in the LPP into an equality constraint, so that the problem can be written in a standard form.
