### Rotating Shaft Modal Analysis In Abaqus

Hello everybody, I am a mechanical engineering student currently working on my master thesis. I am not familiar with ABAQUS/CAE, i just solved simple tutorial problems, always static. But it's the tool I need to use right now. I need to model a rotating shaft supported by bearings. Its section is not circular, but polygonal.

Hi, I want to do transient analysis of an impact of a body-A on another body-B. Body-A is rotating and has a protrusion which should excite body-B and act as a load for transient analysis. I am facing two problems: 1. When doing modal analysis of system i.e. two objects with respective boundary conditions, I can capture modes of both bodies as per their frequency order.

Abaqus offers several methods for performing dynamic analysis of problems in which inertia effects are considered. Direct integration of the system must be used when nonlinear dynamic response is being studied. Implicit direct integration is provided in Abaqus/Standard; explicit direct integration is provided in Abaqus/Explicit.Modal methods are usually chosen for linear analyses because in ...
